

ABOUT YOUR TREATMENT

Azzalure contains a substance called Botulinumtoxina which causes muscles to relax. Wrinkles are formed by excessive contraction of the facial muscles. Injection of small quantities of botulinumtoxina blocks the nerve impulse to the muscle, causing it to relax and in turn smooth the overlying skin to reduce wrinkles.

ON THE DAY

Prior to treatment, make-up will be removed and the skin disinfected. You may experience some discomfort from the needle, but your practitioner may choose to manage this pain with a local anaesthetic cream.

HOW IS IT ADMINISTERED?

AZZALURE® is injected just under the skin into the muscle with a small needle.

RESULTS

AZZALURE normally takes an average of 2-3 days to start working however improvements can be seen as early as 24 hours after treatment. The speed of onset may vary between individuals.

HOW LONG WILL THEY LAST?

The results from treatment can last for up to 5 months.

AFTER YOUR TREATMENT

The treatment may take 10-15 minutes, but consult your practitioner for guidance on this.

- Avoid massaging or applying heat to the area for around 12 hours
- Avoid activities that cause flushing (heavy exercise, alcohol consumption, hot tub use)
- Book a review appointment 2 weeks later to check on how the treatment has gone.
